Note: Students may attend classes at more than one location within a given term. Therefore, when interpreting data in this table it is important to know that each student could be counted for multiple locations if he or she had been enrolled in classes at multiple locations; adding rows in this table will not necessarily equal the overall number of retained students identified in the Overall Retention table above. Within each location, however, the count of students is unique. Therefore, if a student took two classes at Main Campus and one class at Stenstrom, the student would be counted once for Main Campus and once for Stenstrom.
